EDUCATION

The LNM Institute of Information Technology (LNMIIT), Jaipur
B.Tech in Computer Science and Engineering (3rd Year Undergraduate)

2023 – 2027

EXPERIENCE

AI/ML Intern — AICTE Indovation Center

May 2025 – Jul 2025

Jaipur, Rajasthan

- Constructed RAG(Retrieval-Augmented Generation) models using LangChain for Facility & Event Booking Systems.
- Created impact analytics dashboards by integrating Power BI with Python visualizations for 2 regions of India having data for more than (500+ colleges) .

PUBLICATIONS

Co-Author — Elsevier Neural Engineering Series (Communicated)

2025

Elsevier Neural Engineering Book Series

- **Chapters: Issues and Challenges of Neurological Disorders Diagnosis Research, Opportunities and Future Directions of Neurological Disorders Diagnosis Research, Neurology Beyond Deep Learning, Ensemble of Deep Learning Algorithms for Neurological Disorders**

PROJECTS

Insurance premium prediction FastAPI

Individual Project ,2025

- Built a FastAPI-based API using CRUD operations to predict insurance premiums using machine learning, taking inputs like age, BMI, region, and smoking status for more than 500 data points and further performed feature engineering.
- Trained and saved a Scikit-learn regression model, validated predictions, and ensured type-safe inputs using Pydantic.
- Containerized the API using Docker for reproducible deployment.

MCP MultiServer(expense tracker and email response generator)

Individual Project ,2025

- Designed modular MCP-based client-server architecture containing two servers for expense management and email response.
- Developed an asynchronous MCP client using FastMCP that routes queries to the appropriate server based on context.
- Implemented two FastMCP-based servers: an expense tracker and a LangGraph-based email response generator with human-in-the-loop testing via LangSmith, backed by SQLite.

MRI Alzheimer's Classification Pipeline

Research Project,2025

- Deployed a deep learning pipeline to classify Alzheimer's stages(AD,MCI,CN) using 3D MRI scans from ADNI dataset.
- Applied preprocessing (skull stripping, N4 correction, normalization, TorchIO augmentation) on 1000 + scans.
- Crafted ResNet-based multi-view CNN with class balancing and regularization. Getting accuracy of 92 percent

Smart AR Shopping Assistant

Group Project ,2025

- Formed AR-based assistant offering product details, health compatibility, and AI voice-based chatbot for 100+ images.
- Implemented real-time AR scanning and product search using RAG architecture on 100+ object images. [YouTube Link](#).

TECHNICAL SKILLS

Languages: Python, C, Java, SQL

Tools And Frameworks: TensorFlow, PyTorch, Scikit-learn, TorchIO, FastAPI, FastMCP, Git, Docker

Web Tools: HTML, CSS, JavaScript, Power BI

Core Areas: Deep Learning (CNNs(Convolutional Neural Networks), Transformers), RAG, Langchain, LangGraph, MCP, Data Preprocessing

Extra Curriculars AND ACHIEVEMENTS

- Content Writer member of Literary committee, Lnmiit Cricket team Captain, Finalist in SIH 2.0 hackathon
- Udemy: 365 Career Data Science Course, Coursera: Generative AI with LLMs (DeepLearning.AI + AWS)
